1. Check Balloon inflates & deflates

2. Slide deflated Balloon over Colpotomizer

3. Place deflated Balloon ready for use

4. Inflate just enough to stop gas leak

5. Deflate to rotate Colpotomizer

Inflate Balloon just enough to restore pneumoperitoneum if there is a leak during colpotomy or cuff closure.

Never inflate more than necessary.

Deflate Balloon before rotating Colpotomizer.

Reinflate if necessary when Colpotomizer is in new position.

Inflate: squeeze bulb (tighten knob first)

Deflate: unscrew knob

Slide over small end

Approx 2cm below 20mm margin

Inflation tube should point down the Colpotomizer without doubling back over the Balloon.
